

KIM JULONGBAYAN

Full Stack Developer | AI Developer | Backend Systems

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Engineer with 5+ years of on-and-off experience building independent projects and one production system in daily use - scalable web, mobile, and AI-integrated systems.
- Specialized in LLM integration, real-time WebSocket systems, Dockerized cloud deployments, and CI/CD automation.
- Hands of experience with end-to-end system architecture, backend performance optimization, and production infrastructure.

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, React Native, Next.js | Node.js, Express | PostgreSQL | REST APIs
- LLM Integration (Claude, GPT), Stable Diffusion, ComfyUI, Prompt Engineering, AI Workflow Automation
- Docker, CI/CD, Google Cloud, Linux VPS, Nginx, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | June 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 13 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Eliminated an editable payroll spreadsheet: punches are stamped by Postgres, records are append-only, and every change flows through an approved, attributed correction trail.
- Built the admin dashboard in vanilla JS - 6,000+ lines across seven surfaces (live overview, timesheets, payroll, invoicing, corrections, team) with nurse status streaming in over Postgres realtime.
- Automated billing into the owners' Google Sheet via the Sheets API - a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures - plus Apps Script reporting panels.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Shipped natural-language database querying on the Claude API with generated SQL executed through a read-only Postgres role, per-question cost tracking, and nightly encrypted off-site backups.

Independent Full Stack Engineer | 2018 - Present

- Built REST APIs and real-time systems; optimized database queries and backend performance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game with AI Bot System

- Architected full-stack web and mobile game (React, Capacitor, Node.js/Socket.IO) on a sub-100ms WebSocket backend; plays in the browser on desktop and as a native iOS app, Android in review; 570 players have reached a game since launch across 1,045 multiplayer matches, with 40-70 playing daily, grown by word of mouth alone.
- Designed multi-tier AI bot system with ELO-based matchmaking and dynamic difficulty scaling.
- Implemented constraint-based Wordle solver and entropy-driven guess selection for intelligent gameplay.
- Built automated ComfyUI pipelines generating 60+ AI assets, reducing manual creation time by 60%.

Job Email Watcher - AI Job Alert Automation Pipeline

- Built end-to-end n8n job alert pipeline automating Gmail extraction, GPT-4o resume scoring with hybrid AI + code salary algorithm, Google Sheets logging, and Telegram notifications

EDUCATION

- Bachelor of Science in Information Technology — AMA Computer College Makati (3 of 4 years completed)
