PROFESSIONAL SUMMARY

Developer with 5+ years building independent projects and one production system in daily use, and 3+ years specializing in LLM integration, prompt engineering, AI automation workflows, and algorithmic game AI.

TECHNICAL SKILLS

- LLM APIs (OpenAI GPT, Claude), Prompt Engineering, AI Workflow Automation, Output Validation
- ComfyUI, Stable Diffusion, AI Content Generation, IPAdapter, ControlNet (Text/Image/Video)
- Algorithmic AI: Shannon Entropy, Constraint Solvers, Probabilistic Modeling
- JavaScript, TypeScript, Python | Node.js, REST APIs | PostgreSQL | Docker | GCP | Linux VPS

AI SYSTEMS PROJECTS

MDS Pro Solutions - Production Ops Platform with LLM Database Access

- Shipped natural-language database querying on the Claude API: the model writes SQL, a dedicated read-only Postgres role executes it under a row cap, and the model summarises the real result set.
- Instrumented per-question token accounting with per-model pricing, so the cost of every AI answer is recorded alongside it.
- Automated client billing reporting: a scheduled Google Sheets API sync that fills only blank cells and reports mismatches, plus ExcelJS generation of timesheet, payroll and invoice workbooks.
- Sole engineer on the production system - Fastify/TypeScript API, Postgres with row-level security, Chrome MV3 extension, Linux VPS with nightly encrypted off-site backups.

AI Job Matching & Cold Email Automation (Web Extension)

- Scrapes job listings, parses structured data, and matches roles using resume-aware LLM analysis.
- Generates personalized cold emails with structured prompts and tone control via OpenAI API.

RecodeAI - AI-Powered Website Redesigner

- Built chained Claude API pipeline: crawl site, extract DOM, redesign, and auto-deploy to Netlify.
- Implemented real-time SSE streaming with token usage tracking and per-model cost estimation.

Job Email Watcher - AI Job Alert Automation Pipeline

- Built end-to-end n8n pipeline: Gmail job alert extraction → GPT-4o resume scoring with a hybrid AI + code salary algorithm → Google Sheets logging → Telegram notifications.

WordWarz.io - Multiplayer Game AI & Entropy-Based Decision Engine

- Engineered Shannon entropy-based Wordle AI maximizing information gain per guess.
- Built constraint-satisfaction solver handling duplicate-letter and mixed-feedback edge cases.
- Designed 5-tier ELO matchmaking (600–2000) with probabilistic human imperfection modeling.

EXPERIENCE

Independent AI & Full Stack Developer | 2018 – Present

- Built production systems combining LLM APIs, backend services, and automation workflows.

EDUCATION

Bachelor of Science in Information Technology - AMA Computer College Makati (3 of 4 years completed)
