KIM JULONGBAYAN

AI Systems and Operations | Spreadsheets and Automation | Verified Dashboards
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Builds working systems for real businesses with AI and spreadsheets, from the problem through testing and training. Sole engineer on a production platform 15 people use every workday.
- 875 hours and 18,413 prompts in Claude Code across 50 projects (184 active days, Oct 2025 - Oct 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Spreadsheets and reporting: Google Sheets, Google Apps Script, Sheets API, Excel workbooks (ExcelJS), Looker Studio, reconciliation checks
- Automation and AI: n8n, Make, Zapier, Power Automate, Claude API, OpenAI, DeepSeek, REST APIs, webhooks, scheduled jobs
- Languages and data: Python, TypeScript, JavaScript | Supabase, PostgreSQL, SQLite
- Web and content: hand-built websites, page titles and search metadata, product image processing (background removal, WebP compression)

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Built the company's monthly financial view on the owners' billing sheet: profit, cash to date, what clients still owe and expenses for two companies, also shown on the dashboard.
- Wrote a read-only check that recomputes every month from the raw entries, independent of the sheet's formulas, and reconciles it with the pay-period totals and the dashboard.
- Automated billing into the owners' Google Sheet: a scheduled sync fills only blank cells and reports mismatches instead of overwriting typed figures.
- Replaced an editable payroll spreadsheet: times are stamped by the database, records are append-only, and every change goes through an approved, attributed correction.
- Timesheet, payroll and client-invoice workbooks generated from one shared pay calculation, so every report agrees to the cent; an AI assistant answers the owner's questions from read-only data.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Shift Ops Console - Exception Queue and Compliance Pipeline | n8n, Make, Zapier, Apps Script

- Turned scattered clock-ins for a simulated 100-person workforce into a reviewable exception queue, with each tool doing the job it suits: n8n rules, Make digests, Zapier alerts, Power Automate approvals.
- Tested it by planting 370 known problems and catching 359; then found my own scorer was wrong and fixed it, cutting the reported false-alarm rate from 9% to 1.0%.

Jobsift - Self-Hosted Job Pipeline | Python

- Moved an n8n workflow to Python once it outgrew n8n; runs 24/7 on a Linux server with a Google Sheets archive and Telegram alerts. When its AI provider ran out of credits it failed silently, so I traced it and switched providers.

Product Image Pipeline | Python, ComfyUI

- Batch pipeline that turns prompts into finished web assets with no manual step: auto-naming, background removal and compression (WebP files 90% smaller); produced 60+ game avatars.

Cockpit - AI Workspace | DeepSeek Harness

- My own workspace on DeepSeek Harness: one AI agent builds a change, my tests check it, a second agent reviews it, and I approve. Video, made with Claude Code: kimlj.dev/cockpit

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
