KIM JULONGBAYAN

Game and Web Developer | JavaScript, React, Node.js | AI-Assisted Product Development

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience. Built and shipped WordWarz.io to browsers, iOS and Android; sole engineer on a production platform used daily by 15 people.
- Hands-on AI coding workflow with Claude Code, independent reviews and automated checks. Builds playable products, adaptive game opponents and automated asset pipelines.

TECHNICAL SKILLS

- Games and web: JavaScript, TypeScript, React, Node.js, Express, Socket.IO, Capacitor, Zustand, Tailwind CSS
- AI and quality: Claude Code, Claude API, DeepSeek, ComfyUI, Stable Diffusion, Playwright, GitHub Actions
- Data and deployment: PostgreSQL, Supabase, SQLite, Docker, Linux VPS, Nginx, Vercel, Git

PROJECTS

WordWarz.io - Multiplayer Word Game | wordwarz.io | Browser, iOS, Android

- Built the React client and Node.js / Socket.IO server for real-time multiplayer word play; shipped native releases through Capacitor to the App Store and Google Play.
- Designed a five-tier bot system with ELO matchmaking, adaptive difficulty and a constraint solver that handles duplicate letters and mixed feedback.
- Reached 570 lifetime players across 1,045 multiplayer matches, with 40-70 playing daily and 39% returning on a later day (September 2026); grown without ads.
- Built acquisition tracking from landing views and Play clicks through game activity. Added CI checks that play a real match across two browser contexts.
- Own iOS signing, TestFlight and App Store submission through Codemagic, plus signed Android builds and Google Play releases.

Generative Game Asset Pipeline | Python, ComfyUI

- Produced 60+ avatars shipped in WordWarz through a prompt-template batch pipeline with automatic naming, background removal and PNG-to-WebP compression.
- Automated background removal with BiRefNet and image compression to WebP, reducing image size by 90% in the asset pipeline.

Cockpit - AI Development Workflow | kimlj.dev/cockpit | Not public yet

- Built on DeepSeek Harness: a builder agent writes code, automated checks run, and an independent reviewer returns issues before owner approval and a Git checkpoint.
- Live walkthrough and commit history available. Claude Code made the public overview video; the application remains local and is not public yet.

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a TypeScript / Fastify / Supabase platform used every workday by 15 people across a Philippine team and a US owner; owns development and maintenance.
- Shipped a Chrome extension, live admin dashboard and payroll / invoice exports driven by one shared pay calculation, with server-stamped records and attributed corrections.
- Added plain-English database queries through the Claude API, restricted to read-only SQL with row caps and per-question cost tracking.
- Automated billing sync into Google Sheets, filling blank cells and flagging mismatches to preserve figures entered by the owner.

Independent Software Developer | 2021 - Present

- Built and deployed web, game and automation products end to end. Working demos: https://kimlj.dev/hub.

EDUCATION

- BS Information Technology, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
