

KIM JULONGBAYAN

Software Developer | Full-Stack, Backend and Production Systems

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- {'Full stack developer with 5+ years of on-and-off experience building independent projects and one production system in daily use': 'scalable web, mobile and AI-integrated systems.'}
- {'Owns production end to end': 'database schema, backend, front end, deployment, monitoring and the bug fixes that follow. Works independently and writes the docs non-technical users need to run.'}

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Next.js, Tailwind CSS, Capacitor, Chrome MV3 | Node.js, Express, Fastify, Socket.IO | PostgreSQL, Supabase, Postgres RLS | REST APIs, WebSockets, Git
- Production: Docker, CI/CD, GitHub Actions, Linux VPS, Nginx, Vercel, Google Cloud, Playwright, encrypted off-site backups
- Integrations: n8n, Google Sheets API, Google Apps Script, Gmail and IMAP, Telegram Bot API | AI: Claude API, OpenAI GPT-4o, prompt engineering, AI workflow automation

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on a production timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: a remote nursing team in the Philippines and the owner in the US.
- Found and closed a row-level-security hole that let any authenticated nurse read every colleague's billed rate, on a path the API's admin guard never saw.
- Replaced an editable payroll spreadsheet with append-only records: punches are stamped by Postgres, and every correction is attributed and approved.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures.

Independent Full Stack Developer | 2018 - Present

- Built and shipped web, mobile and real-time systems end to end: architecture, development, deployment and maintenance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game (Shipped) | React, Node.js, Socket.IO

- Architected a full-stack game on a sub-100ms WebSocket backend (React, Capacitor, Node.js/Socket.IO), shipped to the browser and the iOS App Store, Android in review.
- 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing on a given day, grown by word of mouth alone.

Jobsift - Self-Hosted Job Alert Pipeline | Python, n8n

- Rewrote an n8n workflow as a self-hosted Python service once it outgrew the platform: five job-board APIs first, IMAP for the gated boards, hard filters before any AI call.

Shift Ops Console - Multi-Platform Automation Pipeline | n8n, Make, Zapier

- Schedule-adherence pipeline for a simulated 100-person workforce, split across six platforms by fit: n8n as the rules engine, Make for digests, Zapier for urgent alerts.
- Its detector caught 359 of 370 planted anomalies; when I audited the scorer behind it, it was wrong, so I rebuilt it and cut reported false positives from 9% to 1.0%.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (3 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, and a redundant axis dispatch, each reviewed by a maintainer before landing.
- mastra, an AI agent framework with over 27,000 GitHub stars (1 merged, 2026): agent model-call retries now honor Retry-After instead of retrying straight back into a rate-limited provider.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
