KIM JULONGBAYAN

AI Automation Developer | Claude API | Make, n8n and Google Sheets Workflows
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI automation developer with 3 years of professional software development and 1-2 years building on LLM APIs and automated workflows. Sole engineer on a production platform 15 people use every workday.
- {'Builds human approval into every AI step it ships': 'drafting, checking and revising run automatically, and nothing is published or saved until a person approves it.'}

TECHNICAL SKILLS

- AI and LLM: Claude API, Anthropic SDK, OpenAI, DeepSeek, prompt engineering, structured JSON output and validation, draft-check-revise loops, per-question cost tracking, MCP servers
- Automation: Make, n8n, Zapier, Power Automate, Google Apps Script, Google Sheets API, REST APIs, webhooks, OAuth 2.0 and API keys, rate-limit handling, scheduled jobs
- SEO: Google Search Console, Bing Webmaster Tools, IndexNow, structured data (JSON-LD), sitemaps, canonical URLs, Core Web Vitals
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, SQLite | Docker, Linux VPS, Vercel, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) used every workday by 15 people, from a nursing team across the Philippines to the owner in the US.
- Built Ask AI on the Claude API: the owner asks in plain English, the model writes the query, and it runs under a database account that can only read, with the cost of every question recorded.
- Built the public AI assistant on mdsprosolutions.com: answers only from a written knowledge file, has no tools, hands unanswered questions to a person, and is capped by rate and hourly spend limits.
- Automated billing into the owner's Google Sheet through the Sheets API: the sync fills only blank cells and reports mismatches instead of overwriting figures a person typed.
- Ran the company site's SEO (structured data, sitemap, Search Console, IndexNow) and its lead forms, routed to sales and HR.

Independent Software Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Pipeline with AI Drafting | Python, LLM APIs

- Rebuilt an n8n workflow in Python when it outgrew the platform: job boards' own APIs, email alerts, filters that run before any AI call, a Google Sheet as the tracker, Telegram alerts.
- AI drafting split into roles: one model writes, a separate checker verifies each claim against the source and must quote it, and rejected claims are rewritten for a fixed number of rounds.

Shift Ops Console - Multi-Platform Automation Demo | Make, n8n, Apps Script

- Scheduled Make scenario for a simulated 100-person workforce: Sheets search, aggregator, router to two Slack messages, about 4 operations a run.
- Worked out the Make cost before building: generating the data there would cost about 4,400 operations a month, so that step moved to Apps Script.

Cockpit - AI Agent Workflow (not public yet, live walkthrough on request) | Node.js

- Status-driven loop: one agent builds, automated tests check it, a second read-only agent reviews in a fixed format and sends problems back, then I approve before a checkpoint is saved.

Open Source - mastra (29,000+ stars) and recharts (27,000+ stars) | TypeScript

- mastra: agent retries now honor the provider's Retry-After on rate limits. recharts: five merged pull requests.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
