

KIM JULONGBAYAN

AI Automation Engineer | Claude API and Agents | n8n, Make and Zapier Integrations

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation engineer who builds the connective layer between tools: multi-step workflows across n8n, Make, Zapier and Power Automate, LLM agents on the Claude API, and the Python and REST integration work that holds them together. I ship it, measure it, and document it so a team can run it after me.
- 776 hours and 16,365 prompts in Claude Code across 43 projects (150 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Workflow automation and iPaaS: n8n (self-hosted), Make, Zapier, Microsoft Power Automate, Google Apps Script, Looker Studio, scheduled jobs, webhooks and multi-step conditional routing
- AI and LLM agents: Claude API (tool use, prompt engineering, structured and checkable output), OpenAI GPT-4o, agents that check each other's work, MCP servers in daily use, cost and token tracking on every call
- Integrations and APIs: REST API design, webhooks, Telegram Bot API, Gmail and email inboxes, Google Sheets API, Supabase, OAuth, third-party APIs behind rate limits
- Languages and data: Python, JavaScript, TypeScript, PHP, SQL; PostgreSQL with row-level security, MySQL, SQLite, schema design and versioned migrations
- Web and infrastructure: React, Next.js, Vite, HTML and CSS, Docker, Linux VPS and Nginx, DNS and hosting, Vercel, Google Cloud, Git and CI/CD

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Built an AI feature into the product on the Claude API: staff ask a question in plain English, the model turns it into a database query, and a locked-down account runs it that can only ever read. Every answer records what it cost.
- Automated client billing into the owner's Google Sheet over the Sheets API: a scheduled sync fills blank cells only and reports mismatches, rather than overwriting a figure a person typed.
- Sole engineer on the platform (TypeScript, Fastify, Supabase/Postgres, published Chrome MV3 extension), used every workday by 15 people, and documented so others can run it.

Independent Automation and AI Developer | 2018 - Present

- Built and shipped automation and AI-integrated systems end to end for my own products and external parties, including integration, deployment and handover documentation.

SELECTED AUTOMATIONS

Shift-Ops Console - One Rules Engine Across Six Platforms

- n8n runs the rules, Make sends the daily summary, Zapier fires urgent Slack alerts, Power Automate handles approve and reject, Apps Script feeds the data, Looker Studio draws the dashboards. Then I tested it honestly: I planted 370 problems and counted how many it found. It found 359, or 97 percent, and the test also showed I had been counting wrong.

Jobsift - n8n Workflow Rewritten as a Python Service

- Started as an n8n workflow with GPT-4o, hit the limits of n8n, and became a Python program. It reads job boards directly where they allow it and email alerts where they do not, throws out obvious misfits before spending anything on an AI call, and splits the writing across several agents so one checks another's claims.

kimlj.dev Site Assistant - Customer-Facing Claude Chatbot

- A chat agent answering visitor questions in the site owner's voice. It builds its knowledge from the site's own pages rather than a hand-written file, so it can never tell a visitor something the site contradicts. Guardrails and a spending cap sit in front of every model call.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
