# KIM JULONGBAYAN

AI & Automation Developer | Dashboards, Agent Workflows & Testing
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

## PROFESSIONAL SUMMARY

- Software developer with 5+ years building software and 1-2 years of AI/automation work, including a personal agent dashboard and production API integrations.
- Build, troubleshoot and verify workflows across JavaScript, Python and AI APIs; own a healthcare platform used daily by 15 people. Demos: kimlj.dev/hub

## TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Node.js, Fastify | PostgreSQL, Supabase, SQLite | REST APIs, Google Sheets API, Apps Script
- Claude Code, Codex, Claude/OpenAI API integrations | n8n, Make, Zapier, Power Automate | Playwright, GitHub Actions, Docker, Linux VPS

## RELEVANT PROJECTS

**Cockpit - Personal AI Development Dashboard** | Local, single-user tool

- Built a project dashboard on DeepSeek Harness with persistent terminals for Claude Code, Codex and other tools, preserving their accounts and permissions.
- Implemented a delivery loop: a builder agent, automated checks, independent review, corrections, owner approval and a saved Git checkpoint.
- Kept terminal sessions alive across browser reloads and reconnects, so rebuilding the dashboard does not terminate the work running inside it.

**Local AI Model Evaluation** | RTX 3080 laptop, 16 GB VRAM

- Measured a local 27B model at about 7 tokens/second after memory spilled to system RAM; tested settings instead of assuming a larger model was useful.
- Reduced one response from 63 seconds to 10 by disabling reasoning; returned daily chat to cloud models when local throughput remained too slow.

**Jobsift - AI-Assisted Email and Job Pipeline**

- Built Gmail extraction, AI scoring, Sheets logging and Telegram alerts in n8n; rebuilt in Python with SQLite, filtering and duplicate handling.
- Diagnosed stopped email extraction from server logs and restored it by switching AI providers; run the pipeline on a Linux VPS with recovery instructions.

**Shift Ops Console - Automation Dashboard Demonstrator**

- Connected rules, alert routing, approvals and Looker Studio dashboards across six platforms for a simulated 100-person workforce.
- Caught 359 of 370 planted anomalies; corrected the scorer after testing exposed misleading results, reducing reported false positives from 9% to 1.0%.

## PRODUCTION EXPERIENCE

**MDS Pro Solutions - Full Stack Developer (Contract)** | Feb 2026 - Present

- Sole engineer on the TypeScript/Postgres timekeeping and billing platform used every workday by 15 people across a Philippine team and US owner.
- Built a live admin dashboard and automated billing into Google Sheets; fills blanks and reports mismatches while preserving manually entered figures.

## TESTING & RELIABILITY

- Built the first Playwright suite for WordWarz.io: a real two-browser match on isolated test data, checked in GitHub Actions against the release client build.
- Merged an API retry fix into mastra (28,706 GitHub stars): honors Retry-After instead of immediately retrying a rate-limited provider.

## EDUCATION

- BS Information Technology coursework, AMA Computer College Makati: 3 of 4 years completed; degree not conferred.
