KIM JULONGBAYAN

AI Automation Developer | Claude Code | Python, n8n and API Integrations
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI automation developer with 5+ years building software end to end and 1-2 years putting LLMs into working automations. Sole engineer on a production platform 15 people use every workday.
- 875 hours and 18,413 prompts in Claude Code across 50 projects (184 active days, Oct 2025 - Oct 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and LLM: Claude Code, Claude API, OpenAI, DeepSeek, MCP servers (Python, FastMCP), structured output checks, per-question cost tracking
- Automation and integration: n8n, Make, Zapier, Power Automate, Google Apps Script, REST APIs, webhooks, Google Sheets API, Gmail and IMAP, Telegram Bot API, scheduled jobs
- Languages and data: Python, TypeScript, JavaScript | Supabase, PostgreSQL, Postgres RLS, SQLite
- Infrastructure: Linux VPS (Ubuntu, systemd), Docker, Nginx, Vercel, GitHub Actions, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Shipped plain-English database questions on the Claude API: the model writes the query, a read-only database role runs it under a row cap, and each answer records its token cost.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches, so figures the client typed are never overwritten.
- Found and closed a permissions hole that let any signed-in nurse read every colleague's billed rate; records are append-only, with nightly encrypted off-site backups.

Independent AI and Automation Developer | 2021 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Cockpit - Agent Workspace for Claude Code | DeepSeek Harness, Node.js

- Built on DeepSeek Harness, DeepSeek's open-source agent runtime: Claude Code, Codex, OpenCode and Hermes side by side as real terminals, each in its own project with its own permissions.
- One task runs plan, build, my tests, then a separate read-only AI reviewer; findings go back for fixes, and nothing is saved until I approve. Video, made with Claude Code: kimlj.dev/cockpit

Jobsift - Self-Hosted Job Pipeline | Python

- Moved an n8n workflow to a Python service once it outgrew n8n: job boards' own APIs, email alerts for the gated boards, Google Sheets archive and Telegram alerts.
- Runs 24/7 on an Ubuntu server under systemd; obvious misfits are filtered out before any AI call, and the AI step is split so one model checks another's claims.

Jarvis - MCP Server for Claude Code | Python, FastMCP

- Python MCP server registered in Claude Code and used daily: four tools that split one plain question across three self-hosted services over REST and join the answers.

Shift Ops Console - Multi-Platform Automation | n8n, Make, Zapier

- Compliance pipeline for a simulated 100-person workforce, split by fit across n8n, Make, Zapier and Power Automate; measured its own detector: 359 of 370 planted anomalies caught.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Socket.IO

- Shipped to the browser, the App Store and Google Play: 570 players have reached a game across 1,045 matches, 40-70 playing daily, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
