

KIM JULONGBAYAN

AI Automation Developer | Make, n8n, Zapier | Google Workspace, Slack, OpenAI Integrations
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Builds, tests and documents the workflows a small team runs on: lead intake and routing, scheduled reports, Slack alerts, and AI steps checked before use. Sole engineer on a platform 15 people use daily.

TECHNICAL SKILLS

- Automation platforms: Make (scenarios, routers, aggregators, schedules), n8n, Zapier, Power Automate, Google Apps Script, Looker Studio
- Integrations: Google Workspace (Sheets API, Gmail), Slack, ChatGPT/OpenAI API, Claude API, REST APIs, webhooks, JSON, OAuth and service-account authentication
- AI with review: structured extraction, separate claim checking before use, read-only data access, per-question cost tracking
- Data and reporting: Google Sheets, Excel workbooks (ExcelJS), PostgreSQL, Supabase, SQLite, deduplication, admin dashboards
- Languages and infrastructure: Python, TypeScript, JavaScript | Docker, Linux VPS, Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome extension) used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Built lead intake on the company website: facility booking requests route to the sales inbox and nurse applications to HR, each validated on the server, filtered for spam and confirmed to the sender by email.
- Automated client billing into the owner's Google Sheet: a scheduled sync fills only blank cells and reports mismatches instead of overwriting typed figures, so no one's entry is silently lost.
- Built an AI assistant that answers the owner's questions from live data (Claude API): it can only read, through a read-only database role with a row cap, and every answer records its cost.
- Replaced an editable payroll spreadsheet: records are append-only, and every correction flows through an approved, attributed trail; timesheet, payroll and invoice workbooks come from one shared calculation and agree to the cent.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Shift Ops Console - One Pipeline Across Make, n8n, Zapier and Power Automate | simulated data

- Make scenario: a scheduled Google Sheets search, an aggregator grouped by severity, and a router that sends urgent items to their own Slack message and the rest to a daily digest, posted by a Slack bot.
- Documented three Make mapping mistakes that run green and send nothing, and a missing upstream step that looks exactly like a broken scenario; fixed it by giving that step its own scheduled trigger.
- Measured the detector on a simulated 100-person workforce: 359 of 370 planted problems caught (97.0%), then found the scorer itself was wrong and rebuilt it, cutting the reported false-positive rate from 9% to 1.0%.

Jobsift - Self-Hosted Lead Capture and Scoring Pipeline | Python

- Captures job leads from five boards and email alerts, merges duplicates across sources on a normalized company and title, and tracks each application's stage in a Google Sheet synced to the database every pass.
- AI drafts are checked before use: an extractor, a drafter, and a separate verifier that tests each claim against the evidence. Obvious misfits are filtered out before any AI call is spent.
- Traced a silent five-day outage in the server log (the AI provider's credits had run out) and moved the pipeline's AI calls to DeepSeek.

WordWarz.io - Real-Time Multiplayer Word Game | React, Node.js, Socket.IO

- Shipped to the browser and the App Store: 570 players have reached a game across 1,045 multiplayer matches, 40 to 70 playing on a given day, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
