

KIM JULONGBAYAN

Developer | Claude Code | Websites, Automation and AI Visuals

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer who builds with Claude Code every day: 834 hours and 17,512 prompts across 48 projects (as of Sep 2026), counted from session transcripts and published at kimlj.dev.
- Wrote 29 Claude Code skills, about 15,800 lines of rules for how it reviews, debugs and checks its own work, so AI output gets checked rather than trusted.
- Remote every workday for a US company, with clear written English (C2) and mostly written communication.

TECHNICAL SKILLS

- AI: Claude Code, Claude API, ChatGPT, DeepSeek, prompt writing, checking AI output against the source
- Websites: HTML, CSS, JavaScript, React, Next.js, Tailwind CSS, Vercel | forms, automatic emails, website chat assistants
- Visuals: ComfyUI and Stable Diffusion image pipelines, background removal, batch asset generation, image compression
- Automation and data: Zapier, Make, n8n, Google Sheets and Apps Script, Supabase and Postgres

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform a US nursing staffing company runs on, used every workday by 15 people, from the nurses to the owner.
- Built the company's public website (mdsprosolutions.com), with booking and application forms that reach the right inbox and send an automatic confirmation email.
- Added a website chat assistant that answers visitors' questions and hands anything it cannot answer to a person by email.
- Keep the owner's billing Google Sheet in sync every day, filling only blank cells and flagging mismatches, so nothing typed by hand is overwritten.
- Generate timesheet, payroll and invoice workbooks from one pay calculation, so every document agrees to the cent.

Independent Developer | 2021 - Present

- Built and shipped web, mobile and AI projects end to end, from design to the live server.

PROJECTS

RecodeAI - AI Website Redesigner | recode.kimlj.dev

- Crawls a website, reads its brand with Claude, generates a redesign and deploys it to a live URL, showing each step and its running cost as it works.

WordWarz.io - Multiplayer Word Game, Designed and Built Solo

- Live on the web, the App Store and Google Play. 570 players have reached a game since launch across 1,045 matches, with 40 to 70 playing on a given day, grown by word of mouth.
- 60+ avatars from my own ComfyUI pipeline: prompt templates in, finished assets out, with background removal and images compressed 90% (PNG to WebP) and no manual step.

Jobsift - A Job Pipeline That Runs Itself

- AI drafts are checked by a second AI pass that verifies every claim against the facts and reports anything it cannot confirm; jobs are tracked in a Google Sheet.

Shift Ops Console - One Workflow Across Six Automation Tools

- Built in one day on simulated data, each part on the tool that suits it (Zapier, Make, n8n, Power Automate, Google Sheets, Looker Studio). Caught 359 of 370 planted problems (97%).

OPEN SOURCE CONTRIBUTIONS

- 5 pull requests merged into recharts and mastra, open-source libraries with over 27,000 GitHub stars each, every one reviewed by a maintainer.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
