KIM JULONGBAYAN

Full-Stack Developer | TypeScript, React, AI Products

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer with 3 years of professional software development experience. Sole engineer on a production timekeeping and billing platform used every workday by 15 people.
- Build web apps, APIs, integrations, and AI features; own deployment and production fixes. Daily Claude Code user, with hands-on Claude and OpenAI API integration.
- Live demos: kimlj.dev/hub | GitHub: github.com/kimlj | Available full time with 10 PM to 3 AM Philippine overlap.

SKILLS

- TypeScript, JavaScript, Python | React, Next.js, Tailwind CSS | Node.js, Fastify, Express, REST APIs
- PostgreSQL, Supabase, SQL migrations, access controls, SQLite | Claude API, OpenAI API, AI agents
- Vercel, Docker, Linux VPS, Nginx, GitHub Actions, Playwright | Google Sheets API, Apps Script, n8n

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built TypeScript/Fastify services, a Supabase/Postgres database, a Chrome extension, and a live dashboard for a US company's timekeeping, payroll, and billing.
- Work directly with the US owner to turn business rules and feedback into working features; own the schema, API, interfaces, deployment, and encrypted off-site backups.
- Built an AI agent that answers questions using database and Google Sheets data, with a database account that can only read and per-question cost tracking.
- Integrated Google Sheets billing and Apps Script reporting; fill blank cells and flag mismatches without overwriting manually entered figures.
- Generate timesheets, payroll, and client invoices from one shared pay calculation, so all three agree to the cent.
- Closed a database permission flaw exposing colleagues' billing rates; maintain 49 SQL migrations and approved correction histories for server-stamped time records.

PROJECTS

Cockpit - AI Development Control Plane | JavaScript, WebSockets

- Built a local control plane on DeepSeek Harness with persistent coding-agent terminals; one agent builds, automated tests check, another agent reviews, and I approve.
- Not public yet; live walkthrough and commit history available. Claude Code made the video at kimlj.dev/cockpit. Local, single-user application.

WordWarz.io - Multiplayer Web and Mobile Game | React, Node.js, Socket.IO

- Built the frontend and game server, deployed with Docker, and released on the App Store and Google Play; 40 to 70 players daily as of Sep 2026.
- Added Playwright tests for a two-browser match and phone, tablet, and desktop layouts; run in GitHub Actions beside 584 server tests.

RecodeAI - AI Website Redesigner | React, TypeScript, Next.js

- Built a Claude-powered workflow that crawls a site, analyzes its brand, generates a redesign, and deploys it to a live URL; live at recode.kimlj.dev.

OPEN SOURCE CONTRIBUTIONS

- Five maintainer-reviewed pull requests merged into recharts and mastra (27,000+ GitHub stars each), covering React chart behavior and backend retry handling.

EDUCATION

- BS Information Technology coursework, AMA Computer College Makati. Completed 3 of 4 years; degree not conferred.
