

KIM JULONGBAYAN

AI-Native Technical Operator | Linux Server | Automation and AI Agents
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Runs an Ubuntu server 24/7 (systemd, Docker, SSH) and troubleshoots with Claude Code, Codex and Hermes: 772 hours in Claude Code as of Sep 2026. Works by inspecting first, keeping the original, then verifying and writing it down.
- Sole engineer on a production platform 15 people use every workday, with nightly encrypted off-site backups.

TECHNICAL SKILLS

- Linux and self-hosting: Ubuntu server, systemd, journalctl, SSH with restricted keys, Docker, Nginx, Immich, Dawarich
- AI tools: Claude Code, Codex, Hermes, OpenCode, Claude API, OpenAI API, DeepSeek, ComfyUI and Stable Diffusion run locally
- Automation: n8n, webhooks, REST APIs, Google Sheets API, Apps Script, Gmail and IMAP, Telegram Bot API, scheduled jobs, watchdogs
- Scripting and data: Python, shell, PowerShell, TypeScript, JavaScript | PostgreSQL, SQLite
- Safety: checked backups, secret rotation, row-level security, change logs with rollback steps

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Sole engineer on the timekeeping and billing platform a US nursing company runs on, used every workday by 15 people: TypeScript, Fastify, Supabase/Postgres and a Chrome extension.
- Nightly encrypted off-site backups of the production database; append-only records with every correction approved and attributed.
- Closed a database permission hole that let any nurse read colleagues' billed rates, on a path the server's admin check never saw.
- Built Ask AI, an agent that answers questions in plain English through a read-only database account capped at 500 rows, with the cost of every question recorded.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - 24/7 Pipeline on Ubuntu | Python, systemd, SSH

- Runs as a systemd service on an Ubuntu 24.04 VPS; a home laptop worker reaches it over SSH on a key locked to one command, kept alive by a watchdog that restarts it.
- Moved the live database behind a checksum check (a copy cut short by a network blip was refused); a checked copy comes home daily, 14 kept, with written rollback steps.
- Found the bot token written into logs, rotated it and turned the logger down; traced a five-day silent failure in the server journal to exhausted AI credits.

Shift Ops Console - Self-Hosted n8n Rules Engine | n8n, Apps Script

- 15 rules in one n8n Code node, tested with 18 checks before import, on simulated data. Fixed a run that never finished: each read step re-ran per item, 1.6 million items.

Jarvis - Self-Hosted AI Search | Docker, Python

- Immich (local AI photo search, about 40,000 photos and videos) and Dawarich (2.6 million location points) in Docker, joined by a Python MCP server I wrote and use from Claude Code.

Local Image Generation - ComfyUI | Python, Stable Diffusion

- Stable Diffusion run locally in ComfyUI, driven over its API by a Python script with background removal and compression, no manual step; produced 60+ game avatars.

WordWarz.io - Real-Time Multiplayer Game | React, Node.js, Docker

- Game server in Docker on the same VPS: 570 players have reached a game across 1,045 matches, 40 to 70 playing on a given day.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
