

KIM JULONGBAYAN

AI Engineer | AI Agents and Automation | Python, TypeScript, APIs
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation engineer with 5+ years building software end to end and 3+ years on LLM integration, AI agents and automated workflows. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and LLM: Claude Code, Claude API, OpenAI GPT-4o, AI agents and tool use, prompt engineering, structured output validation, per-question cost accounting
- Automation and integration: n8n, Make, Zapier, Microsoft Power Automate, Google Apps Script, Google Sheets API, Gmail and IMAP, Telegram Bot API, Slack alerts, scheduled jobs, webhooks, REST APIs
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, Postgres RLS, SQLite | data modeling, ExcelJS reporting
- Infrastructure: Docker, CI/CD, GitHub Actions, Linux VPS, Nginx, Google Cloud, Vercel, Git

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Shipped an AI agent on the Claude API inside the platform: the model writes SQL, a dedicated read-only Postgres role runs it under a row cap, and every answer carries its own token and cost record.
- Sole engineer on the production timekeeping and billing platform 15 people use every workday: a remote nursing team in the Philippines and the owner in the US. TypeScript, Fastify, Supabase/Postgres, a Chrome MV3 extension.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures.
- Wrote the platform's decision and edge-case docs so the owner can follow any workflow without me.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python, n8n

- Rewrote an n8n workflow (Gmail extraction, GPT-4o scoring, Sheets logging, Telegram alerts) as a self-hosted Python service once it outgrew the platform, keeping IMAP for the boards that gate their listings.
- Split drafting across three agent roles so one can check another: an extractor that never sees the candidate, a drafter, and a per-claim verifier that never sees the posting.

Shift Ops Console - Multi-Platform Automation Pipeline | n8n, Make, Zapier, Power Automate

- Schedule-adherence and labor-compliance pipeline for a simulated 100-person workforce, split across six platforms by fit: n8n as the rules engine, Make for digests, Power Automate for approvals, Zapier for urgent alerts.
- Its detector caught 359 of 370 planted anomalies (97.0%); when I audited the scorer behind that number it was wrong, so I rebuilt it and cut reported false positives from 9% to 1.0%.

RecodeAI - AI Website Redesigner | Claude API

- Chained Claude API pipeline: crawl a site, analyze its brand, generate a redesign, and deploy it to a live URL, streamed in real time with per-model cost estimation.

WordWarz.io - Real-Time Multiplayer Game (Shipped) | React, Node.js, Socket.IO

- Shipped to the browser and the iOS App Store with an AI bot engine: 5-tier ELO matchmaking and an entropy-driven guesser with a constraint solver.
- 570 players have reached a game across 1,045 matches, 40-70 playing on a given day, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
