

KIM JULONGBAYAN

Automation Specialist | Zapier, Make, n8n, Google Sheets | Full Stack Developer

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation builder and full stack developer. I connect the tools a small business already uses, so orders, emails and records move on their own instead of being copied by hand.
- Zapier, Make, n8n and Power Automate workflows; Google Sheets API and Apps Script; website forms with automatic confirmation emails; JavaScript and TypeScript for the steps no-code tools cannot do.

TECHNICAL SKILLS

- Automation: Zapier, Make, n8n, Power Automate, webhooks | Google Sheets API, Apps Script, Looker Studio | Telegram bot alerts
- Websites and email: JavaScript, TypeScript, React, Node.js | intake forms, confirmation emails (Resend), Vercel | AI chat assistant (Claude API)
- Data and hosting: PostgreSQL, Supabase | Docker, Linux VPS, Nginx | Git, GitHub Actions

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Sole developer of the timekeeping and billing system a US nursing staffing company runs on, used every workday by 15 people, from the nurses to the owner.
- Synced billing into the owner's Google Sheet with the Sheets API. The daily sync fills only blank cells and reports mismatches rather than overwriting figures someone typed, with Apps Script reporting panels beside it.
- Built the company website's intake (mdsprosolutions.com): a booking form goes to the sales inbox and a nurse application goes to HR, each checked for spam and each sending the person an automatic confirmation email.
- Added a website chat assistant that answers visitors' questions and hands anything it cannot answer to a person by email, with an hourly spending cap so it cannot run up a bill.
- Generated timesheet, payroll and invoice Excel workbooks from one shared pay calculation, so every document agrees to the cent.

Independent Full Stack Developer | 2018 – Present

- Built and ran web apps, bots and automations end to end, from the first version to the live server.

PROJECTS

Shift Ops Console - One Workflow Across Six Automation Tools

- One system for a simulated 100-person workforce, each part on the tool that suits it: Zapier for urgent alerts, Make for the daily digest, n8n for the rules, Power Automate for approvals.
- Tested it by planting 370 known problems. It caught 359 (97%); then I found my own scorer was wrong and rebuilt it, cutting false alarms from 9% to 1%.

Jobsift - A Job Pipeline That Runs Itself

- Started as an n8n workflow (Gmail, AI scoring, Google Sheets, Telegram alerts) and rebuilt in Python when it outgrew it. Runs 24/7 on my own server, logging every job to a Google Sheet and alerting me on Telegram.

WordWarz.io - Real-Time Multiplayer Word Game

- Built and run it, live on the web, the App Store and Google Play. 570 players have reached a game since launch across 1,045 matches, with 40 to 70 playing on a given day, grown by word of mouth.

OPEN SOURCE CONTRIBUTIONS

- 5 pull requests merged into recharts and mastra, open-source libraries with over 27,000 GitHub stars each, every one reviewed by a maintainer.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
