KIM JULONGBAYAN

Full Stack Developer | AI Developer | Backend Systems
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Full Stack Developer with 3 years of professional software development experience building web, mobile, and AI-integrated systems, including a production platform in daily use.
- Specialized in LLM integration, real-time WebSocket systems, Dockerized cloud deployments, and CI/CD automation.
- Hands-on experience with end-to-end system architecture, backend performance optimization, and production infrastructure.

TECHNICAL SKILLS

- JavaScript, TypeScript, Python | React, Next.js, Tailwind CSS, Capacitor, Chrome MV3 | Node.js, Express, Fastify, Socket.IO | PostgreSQL, Supabase, Postgres RLS | REST APIs, WebSockets
- LLM Integration (Claude API, GPT-4o), Prompt Engineering, ComfyUI, AI Workflow Automation, n8n
- Docker, CI/CD, Google Cloud, Vercel, Linux VPS, Nginx, Git | Google Sheets API, Apps Script

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | February 2026 - Present

- Sole engineer on a tamper-proof timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3), used every workday by 15 people. The inverse of tools like Time Doctor: server-set timestamps, append-only records, no screenshots. Built its vanilla-JS admin dashboard - seven surfaces, live nurse status streaming in over Postgres realtime.
- Automated billing into the owners' Google Sheet via the Sheets API - a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures - plus Apps Script reporting panels.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Shipped natural-language database querying on the Claude API with generated SQL executed through a read-only Postgres role, per-question cost tracking, and nightly encrypted off-site backups.

Independent Full Stack Developer | 2021 – Present

- Built REST APIs and real-time systems; optimized database queries and backend performance.

PROJECTS

WordWarz.io - Real-Time Multiplayer Game with AI Bot System

- Architected full-stack web and mobile game (React, Capacitor, Node.js/Socket.IO) on a sub-100ms WebSocket backend; plays in the browser and on the App Store and Google Play; 570 players have reached a game since launch across 1,045 multiplayer matches, with 40-70 playing daily, grown by word of mouth alone.
- Designed multi-tier AI bot system with ELO-based matchmaking and dynamic difficulty scaling.
- Implemented constraint-based Wordle solver and entropy-driven guess selection for intelligent gameplay.
- Built automated ComfyUI pipelines generating 60+ AI assets, reducing manual creation time by 60%.

Jobsift — Self-Hosted Job Alert Pipeline

- Rewrote an n8n workflow as a self-hosted Python package: five job-board JSON APIs, IMAP alerts, HTML as last resort; hard filters run before scoring so a rejected job never costs an LLM call.

OPEN SOURCE CONTRIBUTIONS

- recharts, a charting library with over 27,000 GitHub stars (3 merged, 2026): XAxis height="auto" sizing, a connectNulls bug across stacked series, and a redundant CartesianAxis dispatch. Each reviewed by a maintainer before landing.
- mastra, an AI agent framework with over 27,000 GitHub stars (1 merged, 2026): agent model-call retries now honor Retry-After instead of retrying straight back into a rate-limited provider.

EDUCATION

- Bachelor of Science in Information Technology — AMA Computer College Makati (3 of 4 years completed)
