KIM JULONGBAYAN

AI and Automation Developer | LLM Integration | Workflow Automation
Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- AI and automation developer with 3 years of professional software development experience and 1-2 years on LLM integration, prompt engineering, and automated workflows. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and LLM: Claude API, OpenAI GPT-4o, prompt engineering, structured output validation, per-question token and cost accounting
- Workflow automation and integration: n8n, Google Sheets API, Google Apps Script, Gmail and IMAP, Telegram Bot API, REST APIs, webhooks, scheduled jobs, Chrome MV3 extensions
- Generative AI: ComfyUI, Stable Diffusion, IPAdapter, ControlNet, batch asset pipelines
- Algorithmic AI: Shannon entropy search, constraint satisfaction solvers, ELO rating and probabilistic modeling
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, Postgres RLS, SQLite | data modeling, ExcelJS reporting
- Infrastructure: Docker, Linux VPS, Nginx, Google Cloud, Vercel, Git, CI/CD

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | *Feb 2026 - Present*

- Sole engineer on the internal timekeeping and billing platform (TypeScript, Fastify, Supabase/Postgres, Chrome MV3 extension) used every workday by 15 people: a nursing team working remotely across the Philippines, and the owner in the US.
- Shipped natural-language database querying on the Claude API: the model writes SQL, a dedicated read-only Postgres role executes it under a row cap, and per-question token and cost accounting is recorded alongside every answer.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, so the figures the client typed survive.
- Generated timesheet, payroll and client-invoice Excel workbooks with ExcelJS from one shared pay calculation, so every surface agrees to the cent.
- Replaced an editable payroll spreadsheet: punches are stamped by Postgres, records are append-only, and every correction flows through an approved, attributed trail under row-level security.

Independent Software Developer | *2021 - Present*

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | *Python*

- Rewrote an n8n workflow as a self-hosted Python package once it outgrew the platform: five job boards' own JSON APIs, email alerts over IMAP for the auth-gated boards, and HTML only as a last resort.
- Hard filters for geography, salary floor, posting age and title run before enrichment and scoring, so a rejected job never costs an LLM call. SQLite store, Google Sheets archive, Telegram alert above threshold.

RecodeAI - AI Website Redesigner | *Claude API*

- Chained Claude API pipeline: crawl a site, analyze its brand identity, generate a redesign, and deploy it to a live URL, streamed in real time over Server-Sent Events with per-model cost estimation.

AI Job Matcher - Chrome Extension | *OpenAI API*

- Scrapes job listings, parses them into structured data, matches roles with resume-aware LLM analysis, and generates personalized outreach with tone control.

WordWarz.io - Real-Time Multiplayer Game with AI Bot Engine | *React, Node.js, Socket.IO*

- Shannon entropy-based bot maximizing information gain per guess, with a constraint-satisfaction solver for duplicate-letter and mixed-feedback cases, and 5-tier ELO matchmaking (600-2000) with probabilistic human imperfection modeling.
- Shipped to the browser, the App Store and Google Play: 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing daily, grown by word of mouth alone. 60+ avatars generated by custom ComfyUI pipelines.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
