KIM JULONGBAYAN

Tech Virtual Assistant | Google Sheets, Data Accuracy & Workflow Automation

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305
Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Developer supporting the records and reporting a US nursing staffing company uses every workday. Builds Google Sheets trackers, billing automations and checks that catch mismatched figures before they spread.
- Works remotely with a Philippine team and US business owner. English at C2; available immediately. Interactive work samples at https://kimlj.dev/hub.
- Available Monday to Friday, 8am to 5pm Eastern, for a long-term role of 12 months or more.

SKILLS

- Spreadsheets: Google Sheets formulas, filters, data cleanup, formatting, Apps Script and Excel workbooks
- Data accuracy: duplicate detection, reconciliation, mismatch reports and protected manual entries
- Automation: Google Apps Script and Python in production; Zapier, Make, n8n and Power Automate in a simulated operations project
- Communication and tools: Gmail, Slack, Telegram, ChatGPT, Claude and DeepSeek

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Feb 2026 - Present

- Built and maintain the timekeeping and billing platform used every workday by 15 people, including nurses, staff, admins and the US owner.
- Automated billing updates into the owner's Google Sheet. Fills only blank cells and flags mismatches, preserving manually recorded adjustments and payment details.
- Built monthly reporting across two companies, covering profit, cash, outstanding client balances and expenses, with a recurring-budget tracker.
- Added an independent check that recalculates monthly figures from raw records and reconciles the sheet with pay-period totals and the dashboard.
- Generate timesheet, payroll and invoice Excel workbooks from one shared pay calculation, keeping every output consistent to the cent.
- Improved billing records by moving check-clearance dates out of cell notes into a dated column that can be filtered, sorted and checked for missing entries.
- Built spreadsheet summaries using QUERY and SUMIFS, keeping payment dates separate from money totals so reports stay meaningful.
- Maintain access controls for patient and payroll records, attributed corrections and nightly encrypted backups.

Independent Full Stack Developer | 2018 - Present

- Build and maintain web applications and automations, including data trackers, scheduled alerts and reporting tools.

SELECTED AUTOMATION PROJECTS

Jobsift - Automated Job Tracking and Data Cleanup

- Built a pipeline that reads job boards and email alerts, tracks applications in Google Sheets and sends Telegram alerts. Runs 24/7 on a server.
- Normalize company names and job titles to merge duplicates across sources; preserve separate listings when an employer name is missing.

Shift Ops Console - Simulated Operations Workflow

- Connected Google Sheets, n8n, Make, Zapier, Power Automate and Looker Studio for a simulated 100-person workforce, with urgent alerts and daily summaries.
- Tested against 370 planted problems and caught 359 (97%). Rechecked an incorrect scoring method and reduced reported false alarms from 9% to 1%.

EDUCATION

- {'BS Information Technology, AMA Computer College Makati': '3 of 4 years completed; degree not conferred.'}
