

KIM JULONGBAYAN

Web Designer and Developer | AI-Assisted Delivery | Dashboards, Admin Tools, Marketing Sites

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- I design interfaces and then build them. Most of my work is admin dashboards and marketing sites where the person using it has a job to do, so being clear matters more than being decorative. I build with AI coding tools daily, and the part I am good at is reviewing and correcting what they produce rather than shipping it as given.
- 776 hours and 16,365 prompts in Claude Code across 43 projects (150 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- Design and front end: HTML, CSS, Tailwind CSS, React, Next.js, Vite, responsive and mobile-first layouts, design systems, spacing and alignment discipline, readable and accessible interfaces
- AI-assisted development: Claude Code daily, plus 21 custom skills and 4 subagents I wrote to keep its output correct, and the habit of checking generated work against the requirement rather than accepting it
- Quality and review: automated tests on every push, end-to-end browser tests across phone, tablet and desktop, self-review before calling anything done, and reviewing other people's code on merged open-source pull requests
- Web fundamentals: TypeScript, JavaScript, Node, REST APIs, PostgreSQL and Supabase, Git and GitHub with a team, Vercel and Netlify deployment

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Designed and built the admin dashboard the business runs on: seven screens covering live status, timesheets, payroll, invoicing and corrections, used every workday by 15 people.
- Built the client's marketing site alongside it, including the search-engine work, the contact forms and the bot protection on them.
- Rebuilt three separate sections into one tabbed interface after watching how the page was actually read, which cut the scrolling without removing anything.

Independent Designer and Developer | 2018 - Present

- Designed and built kimlj.dev, my portfolio, including its layout system, motion, dark and light themes and a chat assistant. It is the clearest sample of how I make things look and behave.
- Reviewed and corrected other people's work through merged open-source pull requests: three into recharts, one reviewed by a maintainer before it landed, and one into mastra.
- Work from a written specification rather than a conversation: I read it, list what it does not say, and ask about those before building rather than after.

SELECTED WORK

WordWarz.io - Interface Work That Shipped

- A game live on the iOS App Store, designed and built by me, where the interface had to work on a phone held in one hand. I later added automated checks that prove the phone, tablet and desktop layouts still hold on every change.
- Sixty-plus in-game avatars produced through image-generation pipelines I built, art-directed to one consistent style rather than generated at random.

RecodeAI - Turning a Requirement into a Built Page

- A tool that reads an existing site, works out its brand, generates a redesign and deploys it live, showing its progress and its cost as it goes. Written so the AI output is reviewable at each step rather than a black box.
- Catching where AI output goes wrong is the skill this needs. On my own repositories I write the checks first, then let the tool work, then compare against them, because a confident wrong answer is the failure mode.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
