

KIM JULONGBAYAN

Automation Specialist | AI Agents and Claude Code | Workflow and API Integration

Quezon City, Metro Manila, Philippines | kljulongbayan@gmail.com | +63 961 529 9305

Portfolio: kimlj.dev | GitHub: github.com/kimlj | LinkedIn: linkedin.com/in/kimjulongbayan

PROFESSIONAL SUMMARY

- Automation-focused developer with 5+ years building software end to end and 3+ years on LLM integration, AI agents, and automated workflows. Sole engineer on a production platform 15 people use every workday.
- 772 hours and 16,252 prompts in Claude Code across 43 projects (149 active days, as of Sep 2026), counted from session transcripts and published at kimlj.dev.

TECHNICAL SKILLS

- AI and agents: Claude Code, Claude API, OpenAI GPT-4o, AI agents and tool use, prompt engineering, structured output validation, per-question cost accounting
- Workflow automation and integration: n8n, Make, Zapier, Microsoft Power Automate, Google Apps Script, Google Sheets API, Gmail and IMAP, Telegram Bot API, Looker Studio, scheduled jobs, webhooks, REST APIs, Chrome MV3
- Languages and data: Python, TypeScript, JavaScript | PostgreSQL, Supabase, Postgres RLS, SQLite | data modeling, ExcelJS reporting
- Infrastructure: Docker, Linux VPS, Nginx, Google Cloud, Vercel, Git, CI/CD

EXPERIENCE

MDS Pro Solutions - Full Stack Developer (Contract) | Jun 2026 - Present

- Sole engineer on the production timekeeping and billing platform 15 people use every workday: a remote nursing team in the Philippines and the owner in the US. TypeScript, Fastify, Supabase/Postgres, a Chrome MV3 extension.
- Automated client billing into the owner's Google Sheet via the Sheets API: a scheduled sync fills only blank cells and reports mismatches rather than overwriting typed figures, so the numbers the owner entered survive.
- Shipped natural-language querying on the Claude API: the model writes SQL, a dedicated read-only Postgres role executes it under a row cap, and per-question token and cost accounting is recorded alongside every answer.
- Replaced an editable payroll spreadsheet: punches are stamped by Postgres, records are append-only, and every correction flows through an approved, attributed trail under row-level security.
- Wrote the platform's decision and edge-case docs so the owner can follow any workflow without me.

Independent AI and Automation Developer | 2018 - Present

- Built and shipped AI-integrated web, mobile and automation systems end to end: architecture, development, deployment, and maintenance.

PROJECTS

Shift Ops Console - Multi-Platform Automation Pipeline | n8n, Make, Zapier, Power Automate

- Schedule-adherence and labor-compliance pipeline for a simulated 100-person workforce, split across six platforms by fit: n8n as the rules engine, Make for digests and severity routing, Power Automate for approvals, Zapier for urgent alerts.
- Its detector caught 359 of 370 planted anomalies (97.0%); when I audited the scorer behind that number it was wrong, so I rebuilt it and cut reported false positives from 9% to 1.0%.

Jobsift - Self-Hosted Job Alert and Scoring Pipeline | Python, n8n

- Rewrote an n8n job-alert workflow (Gmail extraction, GPT-4o scoring, Sheets logging, Telegram alerts) as a self-hosted Python service once it outgrew the platform, keeping IMAP for the boards that gate their listings.
- One pipeline across channels: Gmail and IMAP in, scoring, a Google Sheets archive, and Telegram alerts above a threshold. Hard filters run before any AI call, so a rejected job never costs one.

WordWarz.io - Real-Time Multiplayer Game (Shipped) | React, Node.js, Socket.IO

- Shipped to the browser and the App Store: 570 players have reached a game across 1,045 multiplayer matches, 40-70 playing on a given day, grown by word of mouth alone.

EDUCATION

- Bachelor of Science in Information Technology, AMA Computer College Makati (3 of 4 years completed)
